

MIB multifunctional international building system

MERCADO House Internationale Bausysteme GmbH | Adalbert-Stifter-Strasse 23 | D - 34246 Vellmar | www.thinkgreen-connection.com

MIB - system introduction and company profile:

MIB-System is proofing best experience, know-how, improvement and advancement for many years, to provide and deliver two extraordinary construction Systems (MIB-panels & MIB-blocks), which are both produced with an EPS structural formwork system. MIB-System was developed for different regions (warm regions: MIB-panel-System | cold regions: MIB-block-System), on the basis of concrete and reinforced concrete construction. Main reasons and benefits, to construct and realize projects, with the advantages of MIB-System "Made in Germany", are simple handling, fastest construction results, high-level accuracy of fit, thermal insulation values (U-value) from 0.28 - 0.11 W (SQM/k), highly energy-efficient construction, thickness of concretes (4" inch/6" inch/8" inch), maximum protection against natural disasters, such as earthquakes or hurricanes, lower construction costs by savings in time, as well as system instruction, training and site support for the user. The balanced mix of old proven concrete construction quality with the maximum robustness and contemporary thermal insulation characterize these future-oriented construction methods. High savings in cost and energy, resulting from the production and use of these products, is our contribution for the protection of world climate.

Company Overview

Providing Unmatched Quality & Prompt Delivery

MIB is primary a manufacturer and building material provider. The headquarter is located in Germany (Vellmar). MIB has also partnerships aligned with a factory (production facility) in the sultanate of Oman to produce high quality, earthquake secure and energy efficient products. This factory are independently owned by Abdul Ali Karim Group (AAKGC). These partners have the same vision and manufacturing process as MIB, Germany. All MIB EPS facilities are equipped with modern line machinery, which ensures that the highest quality of energy efficient products are manufactured consistently. MIB exceptional network of products enables us this incomparable products that can be delivered promptly anywhere in the MENA region.

People: Understanding your Passion

MIB employees understand their passion to reach beyond the standard, because we are driven by the same goal. We are energetic, motivated and committed to providing you with the highest quality service and energy efficient products in the industry. Consequently, MIB impressive rate of growth over the last three years and current success as a leading developer and manufacturer of MIB-Panel-System with expanded polystyrene (EPS) can be attributed to the hard work of the entire MIB community.

Distribution Network: Fostering Innovation

MIB's distribution network consists of "green", energy-efficient building design professionals throughout Europe, Middle East and North Africa who provide the service and support you need from the beginning of your project(s) to the end.

Products: Offering Exceptional Value

MIB's entire line of products are designed to provide you, as well as deliver you, an unmatched level of quality and performance.

Company Background

Michael Tappe as the General manager, has been actively involved in the construction industry since 1988. Several years ago, Michael Tappe decided to enter and revolutionize the construction industry again, after discovering an energy-efficient home building process, by using insulated concrete forms with EPS, and started his own environmental-friendly, green building material - manufacturing facility, MIB- Systems.

After researching, the existing ICF market, Michael concluded that the industry lacked of for an energy-efficient product, that encompassed quality, strength, innovation and ease of installation. As a result, he decided to start his own company to develop and produce an ICF, that would provide these combined benefits to the consumer.

Michael Tappe: "When we first examined the ICF industry, two areas for improvement became very apparent. First, we observed contractors using a terrific amount of time to assemble products on the job site. Secondly, once assembled, these products performed poorly, when filled with concrete. We modified, optimized and designed our forms, after demand and requirement of the building industry, as well to eliminate these two major problems, in the same time."

Today MIB is a leading developer, owner and manufacturer of EPS building-system materials as a result of providing products, that consistently exemplify exceptional quality, superior strength and ease of installation. Since MIB started, the company has experienced increasing demand for its products, which has led to rapid growth and expansion that is anticipated to continue in the future.
